

Hi .

Thanks for your calling.

One month boarding and Training in Basic Obedience  
K 9 Dogs Trainers (**Advance SECURITY**) training  
with food and ACCOMMODATION charges US\$.1500  
only.

Training Details

1.

- **Selection of dog trainer:**

- Ensure the trainers are properly certified by competent authorities.
- Experience and past history in dog rearing.
- Must be affectionate towards pets.
- Clear tone is a quiet essential commodity.
- Having clean habits.
- Determined and punctual.

2. Kennel Management

- **Kennel management :**

Pets should be made to feel all at ease in kennels.

Points to ponder:

- They should feel the kennels as their own.
- After play time, the place should make them to feel relaxed.

- Privacy should be intact.
- Safety and protection.
- Should be kept clean and dry.
- Floors should be washed with dettol like cleansers.
- If the dogs are let in before the floor dries, they will develop skin allergy.
- Pets should be trained to urinate once in two hours. Pets are highly prone to leptospirosis and jaundice if they are allowed to prowl and excrete.
- Kennels should be well aerated and provided with adequate light source.
- Mosquito repellents should be installed out of reach of pet.

### 3.Grooming

Grooming for the period of at least half an hour after training is quiet inevitable 1.ticks checkup 2.ear and eye checkup 3.hair chipping 4. Dressing and medication incase of any injuries 5.brushing. Note that hair fall happens twice a year for pets .They are namely weight ,weightless .when weightless hair floats in the air .it causes allergy to the people in the surrounding .hence ,the hair should be gathered and put in dustbin after brushing. 6. Finger massage. When wounds are found on the skin, they should be instantly dressed lest the houseflies will sit on the wound and lay eggs there. The eggs will form into worms, which will make the life of the pet quite

miserable. Turmeric will make the wound dry  
.Camphor is a proven remedy for wounds. Coconut oil will also help to heal the wounds. Neem oil helps in reducing the allergies to a considerable extent. Ear should be cleaned once in three days lest the accumulated dirt in ear will fill the ear with unpleasant odor. Cotton should be wrapped round the little finger to clean the ear.

#### 4. Food and Nutrition Method

The food pattern is quite important in rearing pets. It should be recognized at the earliest which food timing pattern a particular pet follows. Food timing should never be changed. It should be made sure the food provided to the pets contains required amount of calcium, and multivitamin. Liver tonic should also be continued.

#### 5. Basic Obedience

1. Heel Walk , (Leash manners,)
2. Distance Control (Sit, Getup, Down, Rest, Flat, Roll & Stay )
3. Come when call.
4. Retrieving.
5. Refusal of food.
